

Thank you for choosing

ellimorph

BIODEGRADABLE, NON-TOXIC & REMOULDABLE PLASTIC

HOW TO USE

- Heat water over 62°C/143,6°F (microwaving some water typically does the trick).
- Leave the pellets in the water until they heat up and turn transparent.
- Remove the pellets from the water with a spoon and mould by hand (add colour at this stage if required).
- Allow the Ellimorph to cool until solid. The plastic will turn white when cool.
- Re-heat if further moulding is required.

TIPS

- Dip in cold water for faster set time.
- Re-heating takes longer the bigger the piece.
- The solid plastic may shrink slightly over time. If you're doing a teeth moulds you may need to re-heat and bite down again to adjust the fit.

CAUTION

- Be careful when handling hot water. Ask an adult to help you.
 - Do not over-heat the water or microwave water with pellets in or they may become sticky and difficult to remove from surfaces.
-
